

## Risk PRO – industrial safety

**Risk PRO is a cutting-edge preventive programme for businesses insured with PZU SA.**

Risk PRO uses sophisticated tools and technologies to improve safety and minimize risk in industrial plants. Our programme also means access to information for better decision-making in areas relevant to the safe growth of your business.

**The PZU LAB EST programme used in Risk PRO coverage tracks technical and organizational risk factors through:**

identifying critical areas within the industrial plant,

customized check lists to meet each industrial client's individual needs,

compatibility with smart sensors installed in doors, hydrants and electrical switch cabinets,

easy-to-install design and user-friendly operation,

real-time tracking of data through a remote application.

**PZU LAB EST implementation**

**STAGE 1**

Site survey for hazards that may lead to a fire, machine failure or outage.

**STAGE 2**

PZU LAB EST installation on the premises.

**STAGE 3**

Performance monitoring and reporting.

The design uses Industry 4.0 technology and allows safety monitoring in multiple areas, such as fire suppression facilities, production areas, logistics, machinery and equipment. The Risk PRO programme is provided in cooperation with PZU LAB.

The Risk PRO programme supports clients in building a culture of safety in business. Its unique features allow companies to self-improve the human factor aspects to reduce the rate of safety incidents.
